When the use of service or facilities furnished by the Company is interrupted due to any cause other than the negligence or willful act of the Customer, or the operation or failure of the facilities or equipment provided by the Customer, a pro rata adjustment of the monthly Recurring Charges subject to interruption will be allowed for the service and facilities rendered useless and inoperative by reason of the interruption, whenever said interruption continues for a period of eight (8) hours in a twenty-four (24)-hour period or more from the time the interruption is reported to or known to exist by the Company, except as otherwise specified in the Company's Price List.
- 2.14.2. In the event the customer's basic local exchange service is interrupted and remains out of order for eight or more hours during a continuous 24-hour period after being reported by the customer, or is found to be out of order by the LEC (whichever occurs first), appropriate adjustments shall be automatically made by the LEC to the customer's bill.

- 2.14.3. If the Customer reports a service, facility or circuit to be inoperative but declines to release it for testing and repair, it is considered to be impaired but not interrupted. No credit allowances will be made for a service, facility or circuit considered by the Company to be impaired.

- 2.14.5. A credit allowance for disruption of service will only be given if the disruption in service exceeds eight (8) hours in a twenty-four (24)-hour period.
- 2.14.6. The credit allowance will be based upon the ratio of the duration of the service interruption (measured from the time the interruption is reported to or detected by Company, whichever occurs first) to the total time in a 30 day month. That ratio, multiplied by the monthly rate for the service affected shall determine the amount of the credit allowance.
- 2.14.7. Credits for interruptions of service shall in no event exceed an amount equivalent to the recurring monthly charges for the month of service during which the event that gave rise to the claim for a credit occurred. A credit allowance as provided in Section 2.14.6 is applied against the rates specified for the service and is dependent upon the length of the interruption. Only those facilities on the interrupted portion of the circuit will receive a credit.

6 - Way Calling

This feature allows a user to establish a conference call of up to six parties including the user.

Anonymous Call Rejection

Incoming Calls are rejected when the calling party does not provide caller identification information.

Call Hold

This feature allows the user to put the caller on a hard hold using a star function. This could be used on a single line phone or a phone set that has no hold button.

Call Forward Busy Line

When a station assigned Call Forward Busy is busy, all calls are forwarded to a predetermined station within the customer group or voice mail. When activated, Call Forwarding Variable takes precedence over Call Forward Don't Answer and Call Forward Busy.

Call Forward Don't Answer

When the base station does not answer an incoming call within the time prescribed, the call is routed to a predetermined alternate telephone number or to voicemail. When activated, Call Forwarding Variable takes precedence over Call Forward Don't Answer and Call Forward Busy. (T)

Call Forward Variable

This optional feature allows all calls directed to a telephone number to be routed to a user defined telephone number or to voicemail. The user can activate/deactivate Call Forwarding and define a telephone number where all calls will be forwarded. Calls **cannot** be forwarded to an International Direct Distance Dialing number. Also known as Call Forwarding. When activated, Call Forwarding Variable takes precedence over Call Forward Don't Answer and Call Forward Busy. (T)

Call Trace

Call Trace enables a customer to trace their last incoming call. Customer Originated Trace deals with information pertaining to a disconnected call. Information about this disconnected call is stored in a buffer. This buffer is updated each time the subscriber's line is called. Thus only the most recent incoming call can be traced. Customers can prevent access to Call Trace by requesting that Call Trace be deactivated on their line(s).

Call Transfer

This feature allows the user to manually transfer an incoming caller to any other phone number, as well as introduce the call before hanging up.

(T)

Call Waiting

With this feature, an incoming call encountering a busy station receives audible ringing, while the called, busy station receives a call waiting tone. This feature **will not** work with hunting.

Ground Start

Lines designated with Ground Start operation provide an immediate trunk seizure signal towards the customer telephone equipment or PBX. With the operation the central office grounds the tip side (receiving side) of the line immediately upon seizure by an incoming call. By detecting the tip and “ground” (instead of loop), the PBX is alerted to the line seizure before ringing begins.

This feature is typically on a line with a single line phone. When you pick up the phone, this feature automatically dials a pre-programmed number.

Hunting

This feature will route a call to an idle line in a prearranged group when the called telephone number is busy. Typically this feature is used with the customer's main telephone number and several telephone lines, so that the customer may receive calls on several lines, although all calls are placed to the same number. This feature is often used on multi-line telephone sets or key systems.

Hunting **will** work on the same line as Call Forward Variable and Call Forward Don't Answer Features.

Hunting **will not** work on the same line as a Call Forward Busy Feature as they are essentially the same feature both are activated only when the line is busy.

Hunting **will not** work on the same line as Call Waiting.

1. Circular - Circular hunting hunts all lines in the hunting group regardless of the starting point.
2. Multi-Line - Feature allows all of customer's lines to reflect the same local telephone number and name for outbound Caller ID. Incoming calls first hit the main number, and then hunt to the member numbers. Incoming calls can not be placed directly to the member numbers. All toll and local usage incurred by member numbers will be billed on the main number.
3. Series - Series hunting hunts for an open line in the order that the customer designates. Unlike Circular hunting, series hunting will stop and give a busy signal or forward to voice mail at the end of the hunting sequence.

Disconnected Number Referral

The Company provides one intercept recording per primary number, for a period of three months. Customers requesting additional number referrals or additional time will be charged an additional fee.

(T)

(T)

Last Call Return

Last Call Return allows the Customer to "prompt" the central office to provide the telephone number of the last incoming call, whether the call was answered or not.

(D)

(D)

Loop Start

Lines designated with Loop Start operation seize a line by bridging through the resistance of both wires of the telephone line. To initiate a call, the customer takes the phone off the hook, sending a signal to seize the phone line. The line forms a 'loop' ring through the telephone to the tip. The central office rings a telephone by sending an AC voltage to the ringer within the telephone. When the telephone goes off-hook the loop is formed.

Message Waiting Audio & Visual*

This feature allows a voice mail user to be alerted to the presence of a voice mail message by lighting a lamp on the Customer's handset and generating a stutter dial tone on the telephone line.

This feature allows a station user to dial frequently called numbers by dialing an abbreviated code.

Speed Dial 30*

This feature allows user to dial up to 30 different telephone numbers by dialing an abbreviated code.

Single Number Service – Simultaneous Ring*

An incoming call rings Customer's line and one additional number simultaneously. Customer activates and deactivates the feature by dialing a "star" code on their handset. If a simultaneous ring number is non-local to customer's line, Customer will be assessed toll charges on their line for the duration of the call when they answer an incoming call on the non-local simultaneous ring line.

Single Number Service – Sequential Ring*

3.3. T1-Based Services

T1 and T1 PRI services are provided through the Company's own switch facilities. These services ride a T1 or T1 capable facility, which consists of common equipment, local exchange switching, and flat usage trunks (or channels) for access to the local exchange and toll networks. The Primary Rate Interface or PRI includes a D channel that supports a data connection between the Customer's PBX or ISDN capable equipment and the Company's switch.

Where the Company is not collocated, the Customer has the option of utilizing a portion of an Enhanced Extended Loop (EEL). The monthly recurring Extended Loop Fee applies in addition to each monthly recurring circuit charge.

3.3.1. Novus T1 and Novus T1/PRI Services

A. Novus Services provide Customers with dynamically allocated bandwidth for local and long distance voice calls and Internet access over T1 connections. When lines are not in use for voice calls, the entire bandwidth is available for Internet access. Voice calls are prioritized.

B. The Company offers three (3) configuration options:

- a. Novus T1 Business Lines: minimum of 1 and maximum of 16 lines.
- b. Novus T1 Digital Trunks: minimum of 1 and maximum of 24 channels.
- c. Novus T1/PRI: includes 23 B channels plus the D channel.

C. Features and feature packages are available with the Novus products. See Section 3.2., preceding, for descriptions and rates.

Call Redirection (N)

Call Redirection allows incoming calls to Customer's voice trunk group to automatically forward to an alternate telephone number in case of a busy or a down condition. As soon as the Company's switch no longer detects a signal from the customer's location, all incoming calls that point into customer's trunk group will automatically forward to alternate telephone number. Customer designates the forward-to number in advance, at the time of the initial provisioning of the services. This product is intended to be used on an incidental basis only for business continuity purposes. This service uses a Market Expansion Line to direct calls to the alternate location. The Market Expansion line charge is included in the Call Redirection fee. Customer will pay toll on all forwarded calls as applicable. Available only on certain T1 products (e.g., Digital Voice T1, ISDN PRI).

Non-Sequential DID Numbers

Individual telephone numbers not in a sequential range that reside on DID (Direct Inward Dial) trunk circuitry. Charge applies when new numbers are assigned by the Company and/or when the customer is porting existing numbers assigned by a previous carrier. Note: new telephone numbers are not guaranteed until the line has been physically installed.

Sequential DID (Direct Inward Dial) Station Number

Telephone numbers in a sequential range that reside on DID (Direct Inward Dial) trunk circuitry. Charge applies when new numbers are assigned by the Company and/or when the customer is porting existing numbers assigned by a previous carrier.
